                                                                                                                  The present invention relates to a hairpin or hammerhead ribozyme, designed to cleave RNA encoding a cyclin or cell-cycle dependent kinas other than cell-cycle dependent kinases CDK1, PCNA and Cyclin B1. Representative examples of ribozyme recognition sites are given in AAA82415 to AAA86787. The ribozyme of the invention is useful for inhibiting restenosis by introduction of the ribozyme into cells. The ribozyme is resistant to endonuclease activity and hence is efficient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         designed to cleave RNA encoding a cyclin or cell-cycle dependent kinase other than cell-cycle dependent kinases CDK1, PCNA and Cyclin B1. The method of the invention is for determining the CC genetic predisposition to cancer in an individual by detecting hRAD54 CC mutations in a sample. hRAD54 is a gene thought to be present in tumours that display allelic imbalance at Ip32, the chromosomal band identified CC as one of four minimal regions of chromosome 1 deletion in breast CC carcinomas. hRAD54 is useful for production of proteins, inter alia, that have been identified as novel hRAD54 by homology between the amino acid sequence given in AAW62186 and known amino acid sequences such as yeast CC RAD54. hRAD54 proteins are used in the treatment of cancer, including CC xeroderma Pigmentosum and Bloom syndrome, Werner's syndromes and X-linked mental retardation with alpha-thalassaemia syndrome and breast cancer. CC hRAD54 polymucleotides for use as a diagnostic agent, especially useful for clasmostic for useful for susceptibility to disease. hRAD54 proteins are useful find antagonists which are proteins are useful in cane therany.

                                                                                              Primers GH28 and GH29 (AAQ15095 and AAQ15096, respectively), complementary to opposite strands of the conserved 5' and 3' ends of the Q beta second exon were used to amplify sample fragments. Some HLA-DQ allele specific probes (including DH61) from two variable regions of the DQ beta second exon were designed based on an analysis of HLA-DQ beta sequences from diverse sources which were grouped into allelic variants. The probes were found to have reasonable specificity for the portions of the allele being detected in genomic DNA samples. See AAQ15093-Q15112. (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for constructing a synthetic polynucleotide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different quality than that conferred by a parent polynucleotide that encodes the same polypeptide. The method comprises: (a) selecting a first codon of the polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                           for detecting sequence variation directly. RS17, RS18 and RS21 are used to distinguish normal alleles (A) from sickle cell alleles (S) from haemoglobin C disease alleles (C). GH66, GH67, GH68 and GH75 are in the amplification and detection of HLA-DQ-alpha sequences. GH60, GH61, GH62, GH69, GH70 and GH71 are used in the amplification and detection of HLA-DQ beta sequences. GH51, GH56, GH57, GH58 and GH59 are used in the amplification and detection of HLA-DR-beta sequences. RS31, RS32 and RS33 are used in a process to amplify the genomic DNA from a known normal individual, a known sickle cell individual, and an individual with no beta-globin gene sequences (GM2064). XX1, XX2, XX3 and XX4 were used to isolate human genomic DNA from clinical samples of various beta-thalassemia genotypes. RS24 was used to isolate the normal beta-globin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence of HLA-DQ-beta

CC the method above; (3) an organism or interest or part containing a synthetic polynucleotide constructed from the method above; (4) an CC synthetic polynucleotide constructed from the method above; (4) an CC organism or interest or part containing a synthetic construct that CC comprises a regulatory polynucleotide operably linked to a trandem repeat CC encodes a regulatory polynucleotide operably linked to a trandem repeat CC encodes a reporter protein, which produces, or is predicted to produce a CC selected phenotype or a phenotype of the same class as the selected CC phenotype in the organism or part; (5) a method of modulating the quality of a selected phenotype that is displayed by an organism of interest or CC part and that results from the expression of a parent polynucleotide that CC encodes the polypeptide; (6) a method of enhancing the quality of a ccodes the polypeptide; and (7) a method of reducing the quality of a ccodes the polypeptide; and (7) a method of reducing the quality of a ccodes the polypeptide; and (7) a method of reducing the quality of a ccodes the polypeptide. The method, is useful for constructing a ccodes the polypeptide. The method, is useful for constructing a ccodes the polypeptide. The method, is useful for constructing a selected phenotype to an organism of interest or part ccodes the polypeptide. The method, is useful for constructing a conferred by a parent polynucleotide that encodes the conferred by a parent polynucleotide that encodes the conferred by a parent polynucleotide that encodes the polypeptide. It is useful for modulating the quality of a selected phenotype to an organism or interest or part in a different ccompany of the conferred by a parent polynucleotide that encodes the conferred to the conferred by a parent polynucleotide that encodes the conferred to the conferred to the conferred to the confer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                codon with a synonymous codon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             different phenotypic preference than the first codon in a comparison of phenotypic preferences in test organisms or parts, where the test organism are selected from organisms of the same species as the organism of interest and organisms that are related to the organisms of interest; and (b) replacing the first codon with the synonymous codon to construct the synthetic polynucleotide. Also described: (1) a method for determining the phenotypic preference of a first codon in an organism of interest or its parts; (2) a synthetic polynucleotide constructed from the organism (3) and (4) are the organism of the organism organism organism organism of the organism organism or organi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 quality than that conferred by a parent polynucleotide that encodes the same polypeptide. The method comprises: (a) selecting a first codon of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polynucleotide from which a polypeptide is producible to selected phenotype to an organism of interest or part in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the synonymous codon is selected on the basis that it exhibits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for constructing a synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polynucleotide for replacement with a synonymous codon,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 to construct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the synthetic polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         a different

determining the phenotypic preference of a first codon in an organism of interest or its parts; (2) a synthetic polynucleotide constructed from the method above; (3) an organism or interest or part containing a synthetic polynucleotide constructed from the method above; (4) an organism or interest or part containing a synthetic construct that comprises a regulatory polynucleotide operably linked to a tandem repeat of a first codon fused in frame with a reporter polynucleotide that encodes a reporter protein, which produces, or is predicted to produce selected phenotype or a phenotype of the same class as the selected
                                                                                                                                                                                       The present invention describes a method for constructing a synthetic polynucleotide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different quality than that conferred by a parent polynucleotide that encodes the same polypeptide. The method comprises: (a) selecting a first codon of the parent polynucleotide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a different phenotypic preference than the first codon in a comparison of phenotypic preferences in test organisms or parts, where the test organism are selected from organisms of the same species as the organism of interest and organisms that are related to the organisms of interest and organism that are related to the organisms of interest and organism that are related to the organisms of interest and organism that are related to the organism of interest and organism of interest organisms of interest and organism that are related to the organisms of interest and organism of interest and organisms of interest organisms of interest and organisms of interest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          same polypeptide. It is useful for modulating the quality of a selected phenotype displayed by an organism or part. The present sequence encodes a synthetic leader sequence, which is used in an example from the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 18 BP; 0 A; 12 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Constructing synthetic polynucleotide for modulating the quality of a selected phenotype displayed by an organism comprises replacing a first codon with a synonymous codon to construct the synthetic polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               08-NOV-2002; 2002US-0425163P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          10-NOV-2003; 2003WO-AU001487

CC phenotype in the organism or part; (5) a method of modulating the quality of a selected phenotype that is displayed by an organism of interest or CC part and that results from the expression of a parent polynucleotide that CC encodes the polypeptide; (6) a method of enhancing the quality of a CC selected phenotype that is displayed by an organism of interest or part CC and that results from the expression of a parent polynucleotide that CC encodes the polypeptide; and (7) a method of reducing the quality of a CC selected phenotype that is displayed by an organism of interest or part CC and that results from the expression of a parent polynucleotide that CC encodes the polypeptide. The method is useful for constructing a CC synthetic polynucleotide from which a polypeptide is producible to confer CC quality than that conferred by a parent polynucleotide that encodes the CC same polypeptide. It is useful for modulating the quality of a selected phenotype displayed by an organism or part. The present sequence encodes CC a synthetic leader sequence, which is used in an example from the present conference of the present conference of the present sequence encodes the conference of the present sequence encodes the conference of the present conference of the present conference of the present sequence which is used in an example from the present conference of the present conferen

Constructing synthetic polynucleotide for modulating the quality of a selected phenotype displayed by an organism comprises replacing a first codon with a synonymous codon to construct the synthetic polynucleotide.

Example 1; SEQ ID NO 5; 86pp; English

The present invention describes a method for constructing a synthetic polynucleotide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different quality than that conferred by a parent polynucleotide that encodes the same polypeptide. The method comprises: (a) selecting a first codon of the parent polynucleotide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a different phenotypic preference than the first codon in a comparison of organisms

```
Ct quality than that conferred by a parent polynucleotide that encodes the came polypeptide. The method comprises: (a) selecting a first codon of the parent polynucleotide for replacement with a synonymous codon, where ct the synonymous codon is selected on the basis that it exhibits a codifferent phenotypic preferences in test crganisms of parts; where the test cranisms of interest and organisms that are related to the organisms of interest; cand (b) replacing the first codon with the synonymous codon to construct the synthetic polynucleotide. Also described: (1) amethod for cetermining the phenotypic preference of a first codon in a comparison of cetermining the phenotypic preference of a first codon to construct the method above; (3) an organism or interest or of the parts; (2) a synthetic polynucleotide constructed from the method above; (3) an organism or interest or part containing a synthetic construct that comprises a regulatory polynucleotide operably linked to a tandem repeat comprises a reporter protein, which produces, or is predicted to produce a cencodes a reporter protein, which produces, or is predicted to produce a selected phenotype that is displayed by an organism of interest or part and that results from the expression of a parent polynucleotide that central from the expression of a parent polynucleotide that canditat results from the expression of a parent polynucleotide that canditat results from the expression of a parent polynucleotide that canditat results from the expression of a parent polynucleotide that canditat results from the expression of a parent polynucleotide that canditat results from the expression of a parent polynucleotide that canditat results from the expression of a parent polynucleotide that canditat results from the expression of a parent polynucleotide that canditat properties to an organism of interest or part canditating the polyneptide. The method is useful for constructing a synthetic polynucleotide that conferred by an organism of interest or part in a differen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Constructing synthetic polynucleotide for modulating the quality of a selected phenotype displayed by an organism comprises replacing a first codon with a synonymous codon to construct the synthetic polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method for constructing a synthetic polynucleotide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          08-NOV-2002; 2002US-0425163P

CC the parent polymucleotide for replacement with a synonymous codon is selected on the basis that it exhibits a great polymucleotide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a great polymucleotide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a ghearism of greater phenotypic preference in test organisms of parts, where the test corganism are selected from organisms of the same species as the organism of interest; codon with the synonymous codon to construct and (b) replacing the first codon with the synonymous codon to construct the synthetic polymucleotide. Also described: (1) a method for interest or its parts; (2) a synthetic polymucleotide constructed from the method above; (3) an organism or interest or part containing a synthetic constructed from the method above; (3) an organism or interest or part containing a synthetic constructed from the comparises a regulatory polymucleotide operably linked to a tandem repeat of a first codon fused in frame with a reporter polymucleotide that comparises a regulatory polymucleotide operably linked to a tandem repeat of a first codon fused in frame with a reporter polymucleotide that the selected phenotype in the organism or part; (5) a method of modulating the quality of a selected phenotype that is displayed by an organism of interest or part cand that results from the expression of a parent polymucleotide that concodes the polypeptide; (6) a method of reducing the quality of a selected phenotype that is displayed by an organism of interest or part and that results from the expression of a parent polymucleotide that concodes the polypeptide; The method is useful for constructing a synthetic polymucleotide that the concodes the polypeptide. The method is useful for constructing the confer entry than that conferred by a parent polymucleotide that the conferred by a parent polymucleotide that the subject of the polymucleotide that the su
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polynucleotide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different quality than that conferred by a parent polynucleotide that encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Constructing synthetic polynucleotide for modulating the quality of a selected phenotype displayed by an organism comprises replacing a first codon with a synonymous codon to construct the synthetic polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12-AUG-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   same polypeptide.                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a kit for diagnosing and treating T-cell CC associated diseases which comprises a panel of nucleic acid primers compectifically priming and allowing amplification of each Vbeta gene, CC vbetaRNA or CDNA. The kit is useful for diagnosing organ transplant crejection and diagnosing and treating T-cell associated diseases. CC including autoimmune diseases, hypersensitivity diseases, infectious diseases, can neoplastic diseases. Autoimmune diseases include Addison's diseases, CC and neoplastic diseases. Autoimmune diseases include Addison's disease, CC atrophic gastritis. Degenerative nervous system diseases include multiple sclerosis and Alzheimer's diseases. Hypersensitivity diseases include Type CC introsis and Alzheimer's diseases. Hypersensitivity diseases include Type CC allergies, Type II hypersensitivities such as those present in CC Goodpasture's syndrome and Type IV hypersensitivities such as those caused by viruses such as HTV, fungal infections such as those caused by the yeast genus Candida, parasitic infections such as those caused by CC schistosomes, filaria and bacterial infections such as those caused by Schistosomes, filaria and bacterial infections such as those caused by Impleaming lumphomas and cancers such as those caused by Impleaming lumphomas and cancers such as those caused by Impleaming lumphomas and cancers such as those caused by Impleaming lumphomas and cancers such as those caused by Impleaming lumphomas and cancers such as those caused by the parasitic diseases include lymphoproliferative diseases.
                                                                                                                                                                                                                                                                                                                                                                          Best Loc

The present invention describes a method for determining an individual's crisk for type 1 diabetes. The method comprises detecting the presence of CC a type 1 diabetes-associated polymorphism in the interleukin 4 (II4) or CC II13 loci in a nucleic acid sample of the individual, where the presence of the polymorphism indicates the individual's risk for type 1 diabetes. CC The human II4 and II13 genes are located on chromosome 5. Also described is a kit for determining an individual's risk for type 1 diabetes. CC conditions to a type 1 diabetes-associated II4 or II13 polymorphism, and conditions to a type 1 diabetes-associated II4 or II13 polymorphism, and CC individually comprising a sequence that hybridises under stringent CC diabetes. Detection of one or more II4 or II13 polymorphism, and CC diabetes. Detection of one or more II4 or II13 polymorphism in a nucleic carid sample of an individual, is useful for the determination of the present invention are also useful for the determination of the present invention are also useful in the field of immunology and CC molecular biology, in particular for detecting an individual's risk for type 1 diabetes, such as multiple sclerosis, myasthenia gravis, CC ulcerative colitis, pernicious anaemia, rheumatoid archiritis, systemic CC represents a primer for human II4 receptor (II4R) promoter polymorphisms, which is used in the exemplification of the present invention. The human CC unich is used in the exemplification of the present invention. The human II4 receptor (II4R) promoter polymorphisms, which is used in the exemplification of the present invention. The human II4 receptor (II4R) promoter polymorphisms, which is used in the exemplification of the present invention. The human II4 receptor (II4R) promoter polymorphisms, which is used in the exemplification of the present invention.
                                                                                                                                Query Match

                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                     media (EM) including a biodegradable polymer, and an isolated nucleic CC acid homologue sequence (II) encapsulated with EM, where the CC nanoparticles are capable of releasing (II) over an extended period of time. (I) have cytostatic and antimicrobial activities, and can be used CC in gene therapy. (I) can be used for sustained delivery and release of a CC nucleic acid homologue within a subject, by encapsulating a nucleic acid homology within (I), and introducing (I) into the subject. (I) can also be CC used for treating a medical condition of a subject by sustained delivery CC of nucleic acid homologue, by encapsulating an isolated nucleic acid condition within EM, so that nanoparticles are formed, and delivering the CC condition within EM, so that nanoparticles are formed, and delivering the CC condition within the subject, where the isolated nucleic acid homologue composition comprising (I) can be used for treating a medical condition comprising (I) can be used for treating a medical condition conspition comprising (I) can be used for treating a medical condition conspition comprising (I) can be used for treating a medical condition conspition comprising (I) can be used for treating a medical condition conspition comprising (I) can be used for treating a medical condition conspition comprising (I) can be used for treating a medical condition conspition comprising (I) can be used for treating a medical condition conspition comprising (I) can be used for treating a medical condition considered the nucleic acid into the cell very efficiently. The present considered the nucleic acid into the cell very efficiently, which is considered in an example from the present invention
                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                  Query Match

The primer is useful for determining the number of repeat units of the microsatellite cited above. The primer is useful in HLA-related research, such as genetic mapping of HLA class II-associated diseases, transplantation matching, population genetics, and identification of recombination hot spots as well as linkage disequilibrium studies. The present sequence represents the human

                                                                                                                                                                                     The invention relates to a method for detecting Staphylococcus DNA in a sample by nucleic acid amplification using various primers (ABL58823-ABL58848) or their variants. The method is used to detect staphylococci that produce enterotoxins and/or are resistant to antibiotics (methicillin), e.g. in blood or tissue samples, foods, water and bacterial cultures. The method allows simultaneous determination of many genes since the specified primers are functional under the same conditions and it eliminates the need for a lengthy culture stage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      as transfection vehicles. The present sequence represents a nucleic acid product of the invention, which is produced by a solid phase chemical reaction, and is modified at the 5' end by an alpha-oxoaldehyde
                                                                                                                                                                                                                                                                                                                                 Detecting Staphylococcus by nucleic acid amplification, useful for testing e.g. clinical samples, can identify simultaneously enterotoxin and methicillin-resistance genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Staphylococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 18 BP; 5 A; 5 C; 3 G; 5 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel method for determining racing potential of a horse. The method comprises measuring: whether grandpaternal DNA is over-represented in the genome of the horse; or in the case where one of the grandmothers was selected for breeding on the basis of racing performance, whether grandmaternal DNA from the selected grandmother is over-represented in the genome of the horse which indicates that the horse has good racing potential. The method of the invention is useful for determining the racing potential of a horse or for obtaining a progeny horse with good racing potential. This polynucleotide sequence represents a PCR primer used in the detection method of over-representation of DNA from male grandparents of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determining the racing potential of a horse comprises measuring whether grandpaternal or grandmaternal DNA from the selected grandmother DNA is over-represented in the genome of the horse.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc elongated DNA amplification technology in vitro, which is characterized by that firstly, a pair of specific primers is synthesized according to the target DNA sequence to be amplified, then a repetitive sequence cc complementary oligo-repetitive sequence of 3 target DNA chain whose tail can dis modified and elongation vitality is lost, then the oligo-repetitive sequence, heat-resisting DNA polymerase, dNTP cc repetitive sequence, chain primer, heat-resisting DNA polymerase, dNTP cc substrate, template DNA, magnesium ion, polymerase chain reaction (PCR) buffer solution and ultra-pure water are mixed uniformly and made into a creation system. The reaction system then undergoes the processes of high ctemp, low-temp, medium-tow temp, medium-tomp, and repeated heat circulation treatment in the heat-circulating instrument to obtain cmillion copies of specific target DNA fragments. The invention adopts a cmillion copies of specific target DNA fragments. The invention adopts a continuous copies of specific target DNA fragments. The invention adopts a continuous copies of the circulation process, so that it can produce lots of target DNA fragments. The present sequence was used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nucleic acid
```

The specification describes a nucleic acid product attached to a support through a linker. The nucleic acid products of the invention are particularly useful as DNA chips for combinatorial chemistry, i.e. for high throughput screening to identify new genes or pharmaceuticals and for scudying toxicity, also for diagnosis. Alternatively, they are useful as transfection vehicles. The present sequence represents a nucleic acid product of the invention, which is produced by a solid phase chemical reaction, and is modified at the 5' end by an alpha-oxoaldehyde

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The intracellular protein TRADD has been identified as a critical link CC between tumour necrosis factor (TNF) receptor binding and downstream CC activation of NF-kappa-B. Overexpression of native TRADD activates NF-CC kappa-B in the absence of TWF and dominant negative mutants of TRADD CC cell types is the induction of apoptosis (programmed cell death). TRADD CC overexpression has been shown to mimic TNF induction of apoptosis as CC well. Data indicates that TRADD and other downstream effector proteins CC are the rate limiting step of TNF action and would therefore serve as the CC most efficient targets for inhibition of TNF-induced events. Antisense CC useful in a number of therapeutic, diagnostic and research applications. CC useful in a number of therapeutic, diagnostic and research applications. CC inhibiting expression of TRADD by contacting human cells or tissues with CC associated with TRADD expression, for example, septic shock, inflammation, or cancer. TRADD antisense oligonucleotides of varying CC inhibitory capabilities are listed in GENESSO records AAZ9343-293517. CC The antisense oligonucleotides exhibit enhanced inhibitory capabilities of wings and a deoxy gap

CC Arabidopsis sp. and AP2 domain containing genes include RAP2 (related to these proteins contain AP2 like domains. Sequences AAB58813-B2588 CC represent protein fragments and peptides from ADC proteins such as CC RAP2.7. Sequences AAB5882-A97035 represent PCR primers used to isolate CC the ADC genes of the invention. The method is used for modulating seed CC traits in canola and soybean plants and for creating transgenic plants. CC The nucleic acids can be used to confer desired traits on essentially any CC plant by increasing or decreasing gene expression. These may be used to increase seed size, protein, amino acid or oil content in crop plants in CC which seeds are used directly for animal or human consumption or for condustrial purposes, such as soybean, canola and other grains. These may be also be used to decrease seed size or producing seedless varieties in CC such as cherries, melons or tomatoes. Primers, which specifically amplify CC AP2 domains of the genes, are particularly useful for identification of CC particular ADC polynucleotides

AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ71440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment. N.B. The SEQ ID Nos 2852, 2913, 2974, 3035, 3096, 3157, 3227, 3297 and 3367, are not accually given a sequence in the Sequence Listing from the present invention.

                                                                                                                                                                                                       Nucleotide sequence AAC66182 encodes human trypsin hL AAB35701, a serine protease. The invention relates to the human hi gene and protein sequences, to a recombinant vector containing the nucleotide sequence, and a host cell containing the vector. Human trypsin hL can be used for screening for serine protease inhibitors, in the preparation of a lung disease model animal, and for the development of an index marker of lung diseases caused by an anti-trypsin hL antibody. The present sequence represents a PCR primer used in the identification of trypsin hL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           drug-drug interactions and adverse side effects. The polymorphisms can used as single nucleotide polymorphisms (SNNe) for detecting genetic linkage related to phenotypic variation in activity or expression of UGT2B protein. The polymorphism containing nucleic acid molecules may also be used for generating genetically modified non-human animals and for obtaining site specific gene modification in cell lines
                                                                                                                                                                                                                                                                                                                                                               Novel gene encoding a serine protease and serine protease inhibitors and to prepare

                                                                                                                                                                                                                                                                                                                                                                                                                                    AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and disgnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.                           of the human UDP-glucuronosyltransferate 2B15 (UGT2B15) gene. UDP-glucuronosyltransferates (UGT8) are a family of enzymes that catalyse the glucuronic acid conjugation of a wide range of endogenous and exogenous substrates. The UGT2B gene subfamily encode steroid metabolizing isoforms in the liver. Alteration of the expression or function of UGTs may effect
                                                                                                                                                                                                                                                          Novel human UDP-glucuronosyltransferase sequence, polymorphisms for genotyping individuals to predict rate of metabolism of substrates for identifying potential drug interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel antisense oligonucleotides (OGNs) (I) 8-2 nucleotides in length that specifically hybridize with and inhibit nucleic acids encoding human Fas-associated death domain (FADD), targete to the 3' untranslated region (3'UTR). (I) can be used to treat animals, especially humans, suspected of having or being prone to a disease or condition associated with FADD expression. AAZ44746-Z44831 represent primers and probes used in the method of the invention
                                                                                                                                                                                                                 Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-JUL-1998;

                                                                                                                                                                     molecules, which comprise human UGT2B sequence polymorphisms (see AAZ95051-Z95110). Probes which detect the UGT2B Locus polymorphisms can be used to detect altered UGT2B metabolism of a substrate in an individual. The nucleic acid molecules comprising a human UGT2B sequence polymorphism can be used in screening assays for genotyping individuals, also to predict their rate of metabolism of UGT2B substrate, potential drug-drug interactions and adverse side effects. The polymorphisms can be used as single nucleotide polymorphisms (SNPs) for detecting genetic linkage related to phenotypic variation in activity or expression of UGT2B protein. The polymorphism containing nucleic acid molecules may also be used for generating genetically modified non-human animals and for obtaining site specific gene modification in cell lines

Novel human UDP-glucuronosyltransferase sequence, polymorphisms for genotyping individuals to predict rate of metabolism of substrates for identifying potential drug interactions.

Example 3; Page 24; 72pp; English.

This sequence represents a PCR primer used to amplify a fragment of the human UDP-glucuronosyltransferase 2B15 (UGT2B15) gene. UDP-glucuronosyltransferases (UGT3B) are a family of enzymes that catalyse the glucuronic acid conjugation of a wide range of endogenous and exogenous substrates. The UGT2B gene subfamily encode steroid metabolizing isoforms in the liver. Alteration of the expression or function of UGT3 may effect drug metabolism. The invention relates to non-chromosomal nucleic acid molecules, which comprise human UGT2B sequence polymorphisms (see AAZ95031-Z95110). Probes which detect the UGT2B locus polymorphisms can be used to detect altered UGT2B metabolism of a substrate in an individual. The nucleic acid molecules comprising a human UGT2B sequence polymorphism can be used in screening assays for genotyping individuals, also to predict their rate of metabolism of UGT2B substrate, potential

The CC method of modulating seed mass in a plant comprises: providing a first CD plant comprising a recombinant expression cassette containing an ADC CC crossing the first plant with a second plant, thereby producing a CC plurality of seeds; and selecting seeds with altered mass. The methods of CC expression. Enhanced ADC expression loads to smaller seeds or seedless CC fruit. The methods can be used to enhance or increase endogenous gene CC expression. Enhanced ADC expression leads to smaller seeds or seedless CC fruit. The methods can be used to produce a broad range of transgenic CC plants. Increasing seed size, amino acid content, and oil content is CC crice, wheat, corn, rye, etc.. Decreasing seeds size is useful in plants CC grown for their fruit and where large seeds are undesirable, e.g. cucumbers, tomatoes, cherries, melons. Sequences AAZO7667-690 represent CC primers based on the sequence of RAP2 genes. These are used for CC amplifying the AP2 domains of the genes

                                         The present invention describes an enzymatic nucleic acid molecule (I) with RNA cleaving activity, which modulates the expression of a plant gene. Also described is a gene comprising a cDNA sequence encoding maize Delta-9 desaturase. (I) can be used to modulate expression of a gene, preferably Delta-9 desaturase or a granule bound starch synthase (GBSS) gene, in a plant (preferably a maize or canola plant). (I) can be used to modulate caffeine synthesis in a coffee plant, nicotine production in a tobacco plant, fruit ripening processes in an apple, tomato, pear, plum or peach plant, flower pigmentation in a rose, petunia, chrysanthemum or marigold plant or lignin production in a tobacco, aspen, poplar or pine
                                                                                                                                                                                                                                                                                                                                 Zwick MG,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ঠ
                                                                                                                  CC Primer JORAP2.2U was used with primer JORAP2.2L (AAV21069) to amplify the AP2 domain of the Arabidopsis RAP2.2 (related to AP2) gene. The PCR CC product could then be used to identify AP2 domain containing (ADC) curie cacids, e.g. from a cDNA library, by using hybridisation CC v21115. The invention provides a method for modulating seed mass in CC v21115. The method involves producing transgenic plants comprising a cc recombinant expression cassette containing an ADC nucleic acid linked to plant promoter. In the example given, the Arabidopsis AP2 gene coding cregion was fused with the cauliflower mosaic virus (CMV) 35 constitutive promoter in the sense or antisense orientations. The genetic constructs were introduced into Arabidopsis and tobacco plants. The 355/AP2 content. Therefore this method is claimed to be useful in producing content. Therefore this method is claimed to be useful in producing content. Therefore this method is claimed to be useful in producing content. Carbohydrate content or oil content, or producing seedless

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to loblolly pine polynucleotides with one or more Simple Sequence Repeats (SSRs) (see AAA74205-A74322). The present sequence is one such SSR repeat. SSRs are also known as microsatellite DNA repeats. The SSRs are useful as genetic markers for genetic mapping, population genetics studies and inheritance studies in various plant

The invention relates to a kit for diagnosing and treating T-cell associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Vbeta gene, VbetaRNA or CDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases

Autoimmune diseases include Addison's disease, atrophic gastritis. Degenerative nervous system diseases include multiple sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type I hypersensitivities such as contact with allergens that lead to allergies. Type II hypersensitivities such as those present in Goodpasture's syndrome and Type IV hypersensitivities such as those manifested in leprosy. Infectious diseases include viral infections caused by viruses such as HIV, fungal infections such as those caused by schistosomes, filaria and bacterial infections such as those caused by Mycobacterium. Neoplastic diseases include lymphoproliferative diseases such as leukaemias, lymphomas and cancers such as cancer of the brain,

This can then be used to predict protein sequence and structure, in organ donation to match the organ with the receiver, and to identify bacteria in a sample. The method can be used type the human leukocyte antigen genes (HLA) and 16s rRNA genes in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA sequence and gene typing; orghuman leukocyte

                                                                                                                                                                                                                                                     similarity to luciferase of Photinus pyralis, Luciola mingrelica, L.cruciata, L.lateralis, Hotaria paroula, Pyrophorus plagiophthalamus, Lampyris moctiluca, Pyrocoelia nayako or Photinus pennsylanvanica, where in the luciferase, an amino acid is different from a corresponding residue in wild-type and has increased thermostability. Also included are a nucleic acid which encodes the thermostable luciferase, a vector comprising the nucleic acid, a cell transformed with the vector, a plant comprising the cell, producing the thermostable luciferase and a kit comprising the thermostable luciferase and comprising the thermostable luciferase. The thermostable luciferase is useful in any bioluminescent assay which utilises luciferase/luciferin reaction as signaling mode. The present sequence is probably a mutagenic comprising the companion of the comprision of the comprisi
                                                                                                                                                                                      PCR primer used to construct a DNA encoding a mutant Photinus pyralis, however it is displayed in figure a referred to anywhere in the specification.

                                                              Matches
                                                                                                                                                                                                        similarity to luciferase of Photinus pyralis, Luciola mingrelica, L. Cruciata, L. lateralis, Hotaria paroula, Pyrophorus plagiophthalamus, Lampyris moctiluca, Pyrocelia nayako or Photinus pennsylanvanica, where in the luciferase, an amino acid is different from a corresponding residue in wild-type and has increased thermostability. Also included are a nucleic acid which encodes the thermostable luciferase, a vector comprising the nucleic acid, a cell transformed with the vector, a plant comprising the cell, producing the thermostable luciferase and a kit comprising the thermostable luciferase. In thermostable luciferase is useful in any bioluminescent assay which utilizes luciferase/luciferin reaction as signaling mode. The present sequence is probably a mutagenic reaction as signaling mode. The present sequence is probably a mutagenic
                                                                                                                                                       PCR primer used to construct a DNA encoding a mutant luciferase Photinus pyralis, however it is displayed in figure 8, a figure referred to anywhere in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Thermostable firefly luciferase mutant-associated primer SAC1-ANTI/6372.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ADQ88659;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                           (GPCRS) and nucleic acids encoding them. The invention also relates to CC sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases CC associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic computation; a mouse comprising a GPCR gene of the invention; a mouse comprising a commutation in a GPCR transgene or in an endogenous GPCR gene; cells derived from the transgenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising to the invention. The cross which hybridise to GPCR polynucleotides of the invention. The comprising a GPCR nucleic acids and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of disease including neurological disorders (e.g., Alzheimer's disease, depression, diabetic neuropathy, Parkinson's disease, or schizophrenia);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        joint disorder; metabolic disorder; nutritive disorder; cancer; kidney disorder; liver disorder; lung disorder; breast disorder; ovary disorder; uterus disorder; prostate disorder; testis disorder; skin disorder; stomach disorder; pancreas disorder; spleen disorder; thymus disorder; thyroid disorder; antiparkinsonian, antimanic; cytostatic; antiinflammatory; vasotropic; antiadiarrhoeic; antidiabetic; CNS; central nervous system; respiratory; antidiarrhoeic; antidiabetic; virucide; hepatotropic; antibacterial; antianaemic; antiseborrhoeic; dermatological; antiulcer; antithyroid; antiallergic; anorectic; immunosuppressive; nephrotropic; gene therapy; GPCR modulator; human; PGR117; reverse transcription-PCR; RT-PCR; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina pectoris, Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 transgenic mouse; neurological disorder; adrenal gland disorder; colon disorder; intestinal disorder; cardiovascular disorder; muscular disorder; blood disorder; immune disorder; bone disorder;

disorders of

the adrenal gland;

disorders of the colon or

The present sequence is that of PCR primer D1SerB for the csrC gene AD076906 of Escherichia coli strain K-12. D1SerB was used with primer D1Check1 AD076916 in an example from the invention for the construction of a csrC mull mutant. CsrC interacts with the RNA-binding protein CsrA, and antagonises the regulatory effects of CsrA. The invention relates to the csrC gene and RNA, and methods of using these to modulate biofilm cformation. A claimed method of altering the metabolism or structural or functional properties of a bacterial cell comprises altering the genetic expression of csrC may be a change in glycogen biosynthesis or gluconeogenesis. A claimed method of reducing biofilm-formation involves decreases csrC transcription in a biofilm-forming cell. A claimed method of inhibiting motility of biofilm-producing bacteria comprises increasing csrC expression. A claimed method of

Example; SEQ ID NO 11; 57pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders; blood disorders (e.g., anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g., obesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases); and disorders of the kidney, liver, lung, breast, ovary, uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence represents a PCR primer used in the isolation of cDNA encoding the novel human GPCR PGR17. Note: The fill sequence data for this patent did not form part of the printed specification; those sequences not shown were obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                  CsrC polynucleotide, used in reducing infection by biofilm producing bacter:
                                                                                                                                                                                                                                                                                Wang

(I) is useful for prognosing and determining progress stage of 4 synthesis-period of neuroblastoma. The present sequence is a primer, used to illustrate the invention.
                                                      produce human IFN alpha 2b protein; and purifying recombinant human IFN alpha 2b protein from the culture medium. The method is useful in preparing and purifying recombinant human IFN alpha 2b protein for the manufacture of a medicament for treating viral diseases, e.g., hepatitis B, or cancer, e.g., bladder carcinoma. Sequences ADO44363-ADO44373 represent specific examples of primer pairs used in a RT-PCR reaction to isolate the human IFN alpha 2b gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IFN alpha 2b;

The present sequence represents one of 276 HLA locus-specific capture oligonucleotides of the invention.

The method is useful for genotyping or for performing primer extension reactions, for screening animals for susceptibility to a disease or disorder (e.g. scrapie), or for breeding scrapie-resistant sheep. The sequences of ADJ46653 and ADJ46717 flank a S (c/g) single nucleotide polymorphism (SNP) and were used to illustrate the method of threating primers ADJ46686-ADJ46691 and probes ADJ46692-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC reference gene expression profile indicative of toxicity, and so CC determining the presence of a toxic response to the agent. Also CC described: (1) an array comprising one or more polynucleotides selected CC from the genes corresponding to the partial sequences given in ABZ82842 CC ; and (2) determining if a gene putatively identified to be a toxic CC response gene plays a role on toxic response pathways by determining the expression profile of the gene after exposure of cells or a human subject CC exposing cells to an agent or isolating cells from a human subject to a known toxic pharmaceutical or industrial agent, comprising: (a) CC exposing cells to an agent; (b) obtaining the test gene expression profile CC was exposed to an agent; (b) obtaining the test gene expression profile CC for a putatively identified toxic response gene after exposure to a known toxic pharmaceutical or industrial agent; and (c) comparing the test profile to the expression profile of a gene with a similar function or CC exposure to other known toxic compounds. The methods are useful for CC predicting and determining toxicological responses on a cellular, organ CC oxicological screening of drugs, pharmaceutical compounds and chemicals of toxicological screening of drugs, pharmaceutical compounds and chemicals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

This invention relates to a novel method for assessing if administration of imatinib would be effective against disease by assaying the expression of genes selected from a set of 77 genes. The 77 genes include HNI, AKRIC3, QARS, KIAA1105, KIAA0668, The movel method is useful for assessing if administration of imatinib would be effective against diseases such as chronic myeloid leukaemia. Twelve samples of poly A+RNA from healthy tissues were used to prepare cDNA. Oligo dT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ADF88693 standard; DNA; 23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 23

These were separated by agarose gel electrophoresis and spotted onto glass slides. Five different slides, each with 4608 cDNAs were prepared. The primers used to identify the 77 genes were of sequences 1-154, the odd numbers being the forward primers and the even numbers the reverse odd numbers being the forward primers and the even numbers the reverse
                                                                                                      This invention relates to novel proteins concerned with reproductive organ formation of fish. Specifically, it refers to proteins that are involved in the formation of fish external genitalia and how toxic chemical substances affect these proteins, and accordingly the association with reproductive abnormalities. The present invention provides a kit to evaluate environmental polition, which uses methods that assess the toxicity of chemicals, for example endocrine disrupters, on the expression of such proteins involved in fish reproduction. This oligonucleotide sequence is a PCR primer given in an exemplification of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the polypeptide; (3) a vector comprising the isolated nucleic acid; (4) a CC recombinant nucleic acid comprising the isolated nucleic acid; (5) a cell transformed with the recombinant nucleic acid; (6) a non-human transgenic CC animal comprising the recombinant nucleic acid; (7) a transformed cell CC comprising at least exogenous nucleic acid molecule, which encodes the CC polypeptide; (8) a specific binding agent that specifically binds to the CC polypeptide; (9) a method of producing the polypeptide; (10) a method of CC making beta-alanine from alpha-alanine; (11) a method of identifying a CC cell comprising alanine 2,3-aminomutase activity; (12) a method for CC making 1,3-propanediol, pantothenate, CoA, 3-hydroxypropionic acid (HP); (CC) a method for making 1,3-propanediol from 3-HP; and (14) a transgenic CC producing beta-alanine from alpha-alanine, 1,3-propanediol, pantothenate, COA, HP or 1,3-propanediol. The present sequence represents a PCR primer which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           XOOOOOOOOOOOOOOOOO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC oligonucleotide. Specifically, the siNAs include short interfering RNA
CC (siRNA). The siNAs can be unmodified or chemically modified, can contain
CC (shRNA). The siNAs can be unmodified or chemically modified, can contain
CC (shRNA). The siNAs can be chemically synthesised, expressed from a
CC deoxyribonucleotides, and can be chemically synthesised, expressed from a
CC for in a contain vivo delivery of siNA; conjugates and/or complexes
CC for siNA; and vectors that express siNA. The siNAs are used to modulate
CC expression of the G72 gene in cells, tissue explants or organisms (e.g.,
CC by ex vivo gene therapy), or in grafts and transplants for the treatment
CC of a variety of conditions. The human G72 siNAs have neuroleptic activity
CC and can be used for treating schizophrenia. The siNAs are also useful for
CC drug screening, diagnosis, therapeutic target identification and
CC validation, genetic engineering, pharmacogenomics, studying gene
CC function, and gene mapping (e.g., of single nucleotide polymorphisms).
CC The present sequence represents a human G72 transcript target sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human G72 gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA

                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to regulating a gammadelta T-cell mediated immune CC response in a mammal and involves administering to the mammal a soluble gammadelta T cell receptor (TCR). The method is useful for treating CC gammadelta T cell receptor (TCR). The method is useful for treating CC e.g. Crohn's disease, ischaemic colitis, irritable bowel disease, and CC colon cancer; a lung condition associated with inflammation such as CC airway hyperresposiveness, pneumonia, tuberculosis, and a primary or CC metastatic lung tumour; a skin condition associated with inflammation or CC useration, and a skin cancer; or a condition associated with inflammation or laceration, and a skin cancer; or a condition associated with concert of accertaion, and a skin cancer; or a condition associated with concert accertaion, and a skin cancer; or a condition associated with concertain or viral infection that involve the epithelial mucosal lining, CC bacterial or viral infection that involve the epithelial mucosal lining, CC sequences ACF35969-978 represent PCR primers used to amplify and alter the deltars sclibble TCR primers used to amplify and alter
                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The method is used for determining the HLA genotype of a subject. The present sequence represents a HLA class II allele

20-DEC-2000; 2000US-00747391.
The present invention describes a cell, comprising alanine 2,3-aminomutase activity, and which produces beta-alanine from alpha-alanine. Also described: (1) a polypeptide comprising alanine 2,3-aminomutase
                                                                            New cell, comprising alanine 2,3-aminomutase activity, useful for producing beta-alanine from alpha-alanine, 1,3-propanediol, pantothenate, CoA, HP or 1,3-propanediol.
                                                                                                                                 WPI; 2003-646066/61.
                                                                                                                                                           Liao
                                                                                                                                                                                                                                                                              31-JUL-2003.
                                                                                                                                                                                                                                                                                                       WO2003062173-A2

                                                                                                                                                                                                                                                                                                                                       promoter having at least one promoter that is modified to have altered cactivity in at least one gram-positive organism (e.g. Staphylococcus aureus or Entercocccus faecalis). The promoter is linked to at least one operator selected from xylo, teto, trpo, malo and lambda-clo, which are operator represses transcription from the fusion promoter. Also included are a vector comprising the isolated nucleic acid, a host cell comprising the nucleic acid. The fusion promoter is useful for identifying genes of involved in cellular proliferation, identifying a compound that reduces the activity or level of a gene product required for proliferation of a cell, inhibiting the activity or expression of a gene in an operon crequired for proliferation, manufacturing an antibiotic, identifying a compound that is required for proliferation of a prokaryotic cell, inhibiting a compound that inhibits the proliferation of a prokaryotic cell and regulating gene expression of a prokaryotic cell and regulating gene expression in bacteria. The present sequence is a PCR primer used in the construction of a fusion promoter of the

Also included are:

CC (1) a vector comprising a promoter operably linked to the nucleic acid

CC encoding a polypeptide whose expression is inhibited by the antisense

CC nucleic acid; (2) a host cell containing the vector; (3) an isolated

CC polypeptide or its fragment whose expression is inhibited by the

CC antisense nucleic acid; (4) an antibody capable of specifically binding

CC polypeptide; (5) producing the polypeptide; (6) inhibiting cellular

CC proliferation or the activity of a gene in an operon required for

CC proliferation; (7) identifying a compound that influences the activity of

CC proliferation; (7) identifying a compound that influences the biological

CC proliferation or that has an activity against a biological pathway

CC required for proliferation, or that inhibits cellular proliferation; (8)

CC or a gene product or that compound that inhibits proliferation of an

CC compound's activity; (11) a culture comprising strains in which the gene

CC or a gene on which the test compound that inhibits proliferation of an

CC compound's activity; (11) a culture comprising strains in which the gene

CC product is overexpressed or underexpressed; (12) determining the extent

CC which each of the strains is present in a culture or collection of

CC strains; or (13) identifying the target of a compound that inhibits the

CC proliferation of an organism. The antisense nucleic acids are useful for

CC identifying proteins or screening for homologous nucleic acids required

CC from the discovery programs or for screening candidate molecules for rational

```
which compounds inhibiting proliferation of an organism act. The method comprises obtaining a culture of strains overexpressing a different product for proliferation of the organism, contacting the culture with a compound to inhibit proliferation of strains that do not overexpress the product and identifying the product overexpressed in a strain that proliferated more rapidly. The method is useful in identifying the target of a compound which reduces the activity or level of gene products required for cellular proliferation. The method may also be used for identifying the therapeutic compounds that act on the novel targets. This sequence represents a PCR primer used to amplify nucleic acid sequences between the compounds of the province of the sequences.

                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes human adenylate cyclase type IV (I). (C) has hypotensive, osteopathic, antianginal, cardiant, vasotropic, antiatherosclerotic, vulnerary, cerebroprotective, antiulcer, antiatherosclerotic, vulnerary, cerebroprotective, antiulcer, antiatherosclerotic, antiallergic, antimigratine, nootropic, tranquilliser, antiasthmatic, antimerary, can be used in the treatment of an adenylate cyclase type IV dysfunction related disease, in particular hypertension, argina pectoris, myocardial infarction, ceretensis, atterosclerosis, angina pectoris, myocardial infarction, creatensis, atherosclerosis, a disease characterised by excessive smooth creatensis, atherosclerosis, a disease characterised by excessive smooth creatensis, atherosclerosis, a disease characterised by excessive smooth creatensis, atheroscopic, ischaemia, ulcer, asthma, allergy, benign compostatic hypertrophy, migraine, vomiting, psychotic, neurological disorder, including anxiety, schizophrenia, manic depression, depression, delirium, dementia, severe mental retardation and degenerative diseases. The present sequence represents a PCR primer used in comparing the expression of adenylyl cyclases in human bronchial endothelial cells,

                                                                                                                         The invention relates to an expression cassette which comprises a control sequence having a PuRs (purine-rich sequence) fragment of an Emri promoter which fragment has enhancer activity and a promoter; and a heterologous protein coding sequence operably linked to the control sequence. The cassette or vector is useful in treating or in manufacturing a medicament for treating skin diseases in humans or animals by gene therapy. The skin diseases includes psoriasis, allergic dermatitis, eczema, cutaneous leishmaniasis, melanoma or other skin cancer. The cassette or vector may also be used in modulating an immune response or in manufacturing a vaccine for genetic vaccination. The present sequence is Emrl PuRs fragment. This fragment is used in the exemplification of the invention

                      CC recombination, of a promoter replacement fragment with a heterologous CC promoter, so that expression of the second allele is regulated by the CC promoter. (M1) is useful for constructing a strain of diploid fungal CC cells in which both alleles of a gene are modified. The diploid fungal CC cells having both alleles modified are useful for identifying a gene that CC contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus and for identifying a therapeutic agent for treatment of a mammalian CC disease. (M1) is useful for identifying a compound which modulates the activity of a gene product, preferably enzymatic activity, carbon CC compound catabolism, biosynthetic, transporter, transcriptional, CC translational, signal transduction, DNA replication and cell division activity. The method is useful for identifying a compound having the cativity to inhibit growth or proliferation of C. albicans cells and for treating infection by C. albicans. The present sequence is that of a PCR primer used in the method of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 1312
